PROJECTS

SENTIMENT ANALYSIS APP | PERSONAL PROJECT

- Developed a sentiment analysis application capable of predicting the sentiment of a tweet or calculating the average sentiment on a given topic.
- Utilized a real-world Reddit dataset enriched with the latest trendy vocabulary and emojis to fine-tune the RoBERTa model for enhanced accuracy.
- Integrated Twitter API to fetch real-time tweets, which are analyzed by the fine-tuned RoBERTa model to generate sentiment predictions.
- Delivered insights into trending topics and public sentiment with a focus on real-world applicability and modern language constructs. Got a test accuracy of 85% on the dataset.

RESUME ANALYZER | PERSONAL PROJECT

- Designed a resume analyzer application that processes resumes in PDF or DOCX format and recommends relevant job listings and courses based on the user's profile.
- Employed large job and course datasets, encoding each entry into a 384-dimensional vector using a Sentence Transformer.
- Used the Sentence Transformer to embed the processed resume and applied cosine similarity to identify the top job listings and courses tailored to the user's skills and experience.
- Enhanced career guidance by leveraging state-of-the-art NLP techniques and scalable vector matching.

MODIFIED CHESS GAME WITH AI AGENT | PERSONAL PROJECT

- Developed a unique chess game variant where the queen's movement combined traditional rules with knight-like moves.
- Designed an AI agent capable of playing the game using algorithms such as alpha-beta pruning (at depth 6) and Q-learning.
- Implemented a scoring system based on piece mobility, pawn structure, king safety, and material balance to guide the AI's decision-making.
- Showcased the interplay of algorithmic design and game theory in unconventional scenarios.

EXPERIENCE

PAYACTIV, ISLAMABAD | DATABASE AND DATA ANALYTICS INTERN

June 2023 – August 2023 | Islamabad, Pakistan

- Optimizing database performance and ensured integrity through backups and recoveries
- Documenting database processes, procedures and best practices.4
- Generating reports and visualizations based on database data for analysis and decision-making purposes using pandas and matplotlib.

EDUCATION

NATIONAL UNIVERSITY OF SCIENCE AND TECHNOLOGY

BACHELOR OF SCIENCE IN
COMPUTER SCIENCE

Expected June 2026 | Islamabad,
Pakistan

Up to the 4th Semester

Cum. GPA: 3.66 / 4.0

SKILLS

PROGRAMMING

3+ years:

Python • pandas • numpy • matplotlib •
Seaborn

1+ years:

Tensorflow • PyTorch • Reactjs • Nodejs
• Scikit-learn • SpaCy • NLTK

TECHNOLOGY

Git/Github • Linux

Flask • SQL • NLP

AI • Deep Neural Networks •

Reinforcement Learning • Deep Learning

COURSEWORK

UNDERGRADUATE

Artificial Intelligence

Machine Learning

Probability & Statistics

Calculus I-II

Data Structures & Algorithms

Linear Algebra

Web Engineering

CERTIFICATIONS

Supervised Machine Learning:

Regression and Classification

(DeepLearningAI)

Advanced Learning Algorithms

(DeepLearningAI)

Introduction to Backend Development

(META)
